PROFESSIONAL SUMMARY

Results-oriented SQL Developer with 1+ year of hands-on experience in T-SQL, Stored Procedures, Views, Triggers, CTEs, and Window Functions across SQL Server, MySQL, and SQLite. Proficient in query optimization, execution plan analysis, indexing strategies, and ETL pipeline development to support data warehousing initiatives. Experienced in data modeling, normalization (1NF–3NF), and ACID-compliant transaction management. Skilled in Power BI dashboard development, Python automation, and Git-based version control. Passionate about delivering high-performance, scalable database solutions that enable data-driven business decisions.

TECHNICAL SKILLS

Languages & Query	: T-SQL, SQL, Python
Databases	: SQL Server, MySQL, SQLite
Tools	: SSMS, Power BI, Git, GitHub
Concepts	: ETL, Data Warehousing, Normalization, Indexing, ACID, Data modeling
Reporting	: Power BI, Business Intelligence, Dashboard Development

INTERNSHIPS

Internship — AASVA Technologies India Pvt. Ltd. (SQL Intern)

Jan 2025

- Designed and developed optimized T-SQL queries, stored procedures, and views in SQL Server Management Studio (SSMS) to support internal reporting and data retrieval workflows.
- Assisted in building and maintaining ETL pipelines for data extraction, transformation, and loading across multiple data sources to support data warehousing initiatives.
- Implemented indexing strategies and refactored existing SQL scripts to enhance query efficiency and overall database performance.
- Collaborated with the BI team to develop Power BI dashboards, translating raw SQL data into actionable business insights for stakeholders.
- Managed database scripts and stored procedures using Git version control, ensuring clean and trackable deployment across development environments.

PROJECTS

Project — Customer Shopping Behavior Analysis

- Analyzed a structured retail dataset of 1,000+ customer transaction records using SQL to uncover shopping patterns, product preferences, and seasonal trends.
- Wrote complex T-SQL queries using CTEs, subqueries, window functions (RANK, ROW_NUMBER, LEAD/LAG), and aggregations to segment customers by purchase behavior and spending category.
- Designed a normalized relational database schema (3NF) with proper indexing to ensure data integrity and optimized query performance.
- Extracted key business insights such as top-performing product categories, high-value customer segments, and peak shopping periods to support data-driven decision-making.
- Published complete SQL scripts and documentation on GitHub for version-controlled, reproducible analysis.

EDUCATION

M.sc Geography with Ancillary Statistics	<i>M.V. Muthiah Govt. Arts College</i>	2019
Diploma in Python and SQL	<i>Cadd Cae Computers</i>	2022
